FUNDAMENTALS OF NOISE EXPOSURE

Noise	Described as an unpleasant sound that the listener does not want to hear . It is also known as
Occupational Hearing Loss	Defines a hearing impairment in one or both ears , partially or completely, that results from one's employment . It includes acoustic trauma as well as noise-induced hearing loss .

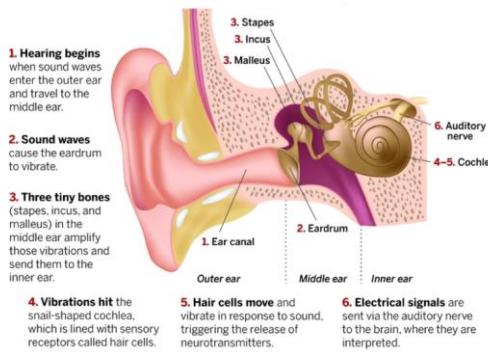

LEGISLATION

Permissible Exposure Limit (PEL), FMA, Reg. 5 & 6 (Noise Exposure) 1989

1. No employee shall be exposed to noise level exceeding equivalent continuous sound level of **90 dB (A)** or exceeding the limits specified in the **First Schedule** or exceeding the **daily noise dose of unity**.
2. No employee shall be exposed to noise level exceeding **115 dB (A)** **at any time**.
3. No employee shall be exposed to **impulsive noise** exceeding a peak sound pressure level of **140 dB**.

HEARING MECHANISMS

How We Hear

IS YOUR WORK AREA NOISY?

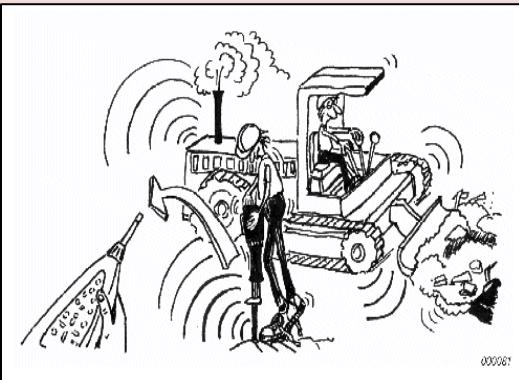

Stand at arm's length from co-worker. If you cannot speak in normal tone and must SHOUT to communicate, then the level is too high and should be reduced

WHEN IS WORKPLACE NOISE IS DANGEROUS

There's only one way to know. Have the noise evaluated by registered noise competent person to conduct a **noise monitoring**. There are two basic types:

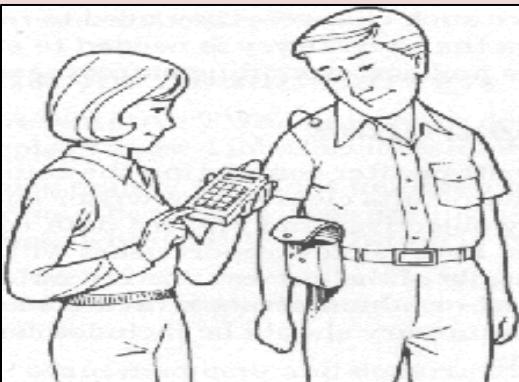

- **Area monitoring.**

Use a sound-level meter to identify areas in the workplace that may put workers' hearing at risk.

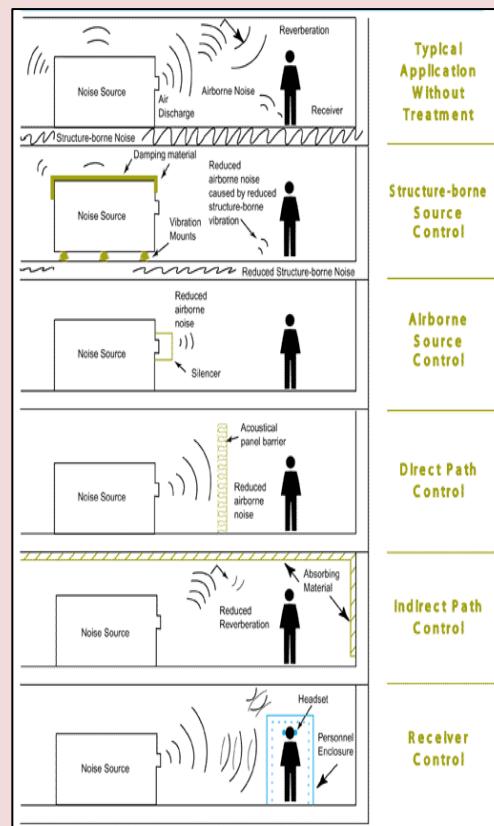

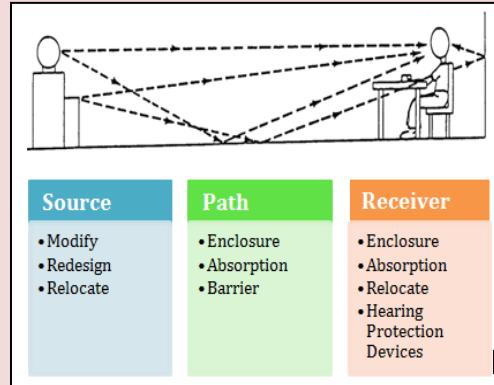

- **Personal monitoring.**

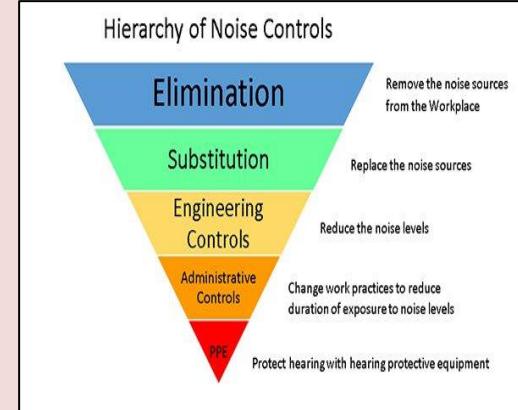

Use a dosimeter to estimate an individual's daily noise dose exposure.

METHOD OF NOISE CONTROL

HEIRARCHY OF CONTROL

AUDIOMETRIC TESTING

Audiometric is

- Conducted to determine worker's threshold of audibility or worker's hearing ability
- Employer shall appoint approved audiometric testing

Pelaksanaan Pelan Strategik Penguatkuasaan Pendedahan Bising 2018-2020

Model pelan strategik yang akan dilaksanakan adalah merangkumi 4 inisiatif yang berteraskan satu tunjang utama iaitu NET.

Model Pelan Strategik adalah seperti berikut;

- ❖ Transformasi Penguatkuasaan Kebisingan atau *Noise Enforcement Transformation* (NET)
 - ✓ Penetapan Piawai Kebisingan
 - ✓ Pemerkasaan Pengamal KKP
 - ✓ Promosi dan Publisiti Kesedaran Bising

Noise Enforcement Transformation (NET)

Secara amnya, NET merangkumi 3 program penguatkuasaan

Peringkat 1: Pengesanan Awal

- Pematuhan kepada peraturan 9, 10, 12 dan 20

Peringkat 2 : Proaktif

- Penumpuan kepada kawalan kebisingan (*noise control*)

Peringkat 3 : Reaktif

- Semakan semula keberkesaan langkah kawalan bagi tempat kerja yang mempunyai kes NIHL

KEBERHASILAN PELAN STRATEGIK

- ✚ 80% tempat kerja yang diperiksa mencapai sekurang – kurangnya Gred C
- ✚ Pengurangan kes baru masalah pendengaran berkaitan bising di tempat kerja (*Occupational Noise Related Hearing Disorders*) sebanyak 30%

PEMATUHAN DAN PELAKSANAAN OLEH MAJIKAN

PEMANTAUAN PENDEDAHAN PEKERJA AWAL

Senarai OYK Bising di
<http://mykkp.dosh.gov.my/>

PEMANTAUAN PENDEDAHAN PEKERJA AWAL POSITIF

Sekiranya $\geq 85\text{dB(A)}$

PELAKSANAAN UJIAN AUDIOMETRIK

Senarai pusat ujian audiometrik di
<http://www.dosh.gov.my/>

KAEDAH KAWALAN KEBISINGAN

1. Kawalan Kejuruteraan
2. Kawalan Pentadbiran

PEMANTAUAN PENDEDAHAN PEKERJA AWAL TAMBAHAN

Terdapat perubahan pengeluaran, proses, peralatan, langkah kawalan atau perubahan personel dalam kilang

MELAKSANAKAN SISTEM PENGURUSAN KEBISINGAN

BAHAGIAN HIGIEN INDUSTRI DAN ERGONOMIK

JABATAN KESELAMATAN DAN KESIHATAN PEKERJAAN MALAYSIA
